		SUPPLEMENT TO REPORT #	
THIS IS UNEVALUATED INFORMATION			
<p>Nehez Ipari Kiospont Export, a Hungarian government agency known by the abbreviation "NIKEK" in Budapest. It was the Central Headquarters for Export of Heavy Industry. NIKEK was active under the Ministry of Foreign Trade prior to World War II; inactive during World War II, and reactivated in 1946 under the same Ministry. From 1946 to 1949, NIKEK was solely responsible for all Hungarian export activity of heavy industry and dealt with war reparations to the USSR. Due to the growth of the Hungarian heavy industry activity, the following additional and separate agencies had to be established by the Ministry of Foreign Trade and were housed in the same building with NIKEK:</p> <ul style="list-style-type: none"> <li>(a) In 1949, Metallimpex was organized to handle the export of all ferrous and non-ferrous metals except chemicals</li> <li>(b) In 1951, Technimpex was organized to handle the export of all small, non-precision equipment; such as fans, pumps, diesel engines.</li> <li>(c) In 1952, Komplex was organized to handle the export of factory plans and, in some cases, supervised the construction of factories in foreign countries. This Agency had sold plans and supervised construction of factories in Red China and in North Korea.</li> </ul>			
<p>2. The NIKEK building formerly housed the Takarek Penstar bank. <u>See Enclosure (A),</u>  <span style="float: right;">1:25,000 to identify</span>  the following points./</p>

3. For further identification of the NIKEX building, see Enclosure (B), an overlay of a city plan of Budapest, 1956 showing the following points.]

- Point 1: Vorosmarty ter [Square]  
 2: NIKEX Building on Dorottya Utca [Street]  
 3: Ministry of Finance  
 4: Jozsef Attila Utca [Street]  
 5: Roosevelt ter [Square]  
 6: Hungarian Academy of Sciences  
 7: Danube  
 8: Szechenyi Bridge  
 9: Kossuth Bridge  
 10: Vaci Utca

4. [ ] the export of maritime equipment of NIKEX. In 1951-52, 12 oceangoing freighters, 1100 tons [ ] with two 600 European HP diesel engines and special hulls for cruising in icy waters with a speed of 11 knots were exported to the USSR. The freighters were made by the Ganz Shipyard in Budapest. The Ganz Shipyard is also known as Gheorghiu Dej. The diesel engines were made by the Lang Gephyar located on Vaci Utca, Budapest V. In 1952, 16 oceangoing freighters as mentioned above were exported to the USSR. They were made by the Ganz Shipyard and the Obudai Shipyard located on the west bank of the Danube in Budapest. [ ]  
 The diesel engines were made by the Lang Gephyar. In 1954, 22 oceangoing freighters of the same type were exported to the USSR and made by the two aforementioned factories. [ ] The diesel engines were produced by the Lang Gephyar.

5. Just after World War II, one oceangoing, 365 passenger ship was exported to Poland. It had two 600 European HP diesel engines by Lang Gephyar and it was about 49 meters long. Poland paid US \$960 thousand for it. It was made by the Ganz Shipyard. One other had been scheduled for export to Poland but was never made.

6. The following 600-passenger (about 60 meters long), side paddle, river steamers, with boilers totalling 180 square meters of heating surface in each ship were exported to the USSR as indicated: In 1951, 3; 1952, 6; 1953, 9; 1954, 12; 1955, 18, and the same amount scheduled yearly thereafter. The above steamers were made by the Obudai Shipyard. The USSR wanted this firm to also build 2200 ton freighters in 1951-52. A launching platform to handle this type of freighter was completed in 1954 but none had been built as yet. Since 1951, 32 five-ton and 16 combination 50-100 ton floating cranes were exported per year to the USSR. This equipment was made by the Ganz Shipyard. This firm also made one 2200 ton freighter for the USSR just after World War II and one other also destined for the USSR was under construction but not delivered because the USSR did not like the first one. The second, partially completed freighter was rusting away in the firm's yard.

7. There were approximately 500 employees of which 50% were women in 1950. This figure was reduced to 450 employees in 1951 and was never below 400 for the ensuing years. There were about eight engineers and 10-12 specialists permanently assigned. Each Hungarian commercial attache in the USSR, Poland, Rumania, Bulgaria, Czechoslovakia, Berlin, France, the UK, China, North Korea, and Egypt had a NIKEX representative appointed by the Ministry of Interior. Typists earned 780 forints per month. The director earned 3500 forints per month and the department heads earned 2800 forints. The section leaders earned 2100 forints per month. [ ]

[ ] Specialists if they were graduate engineers earned 1700 forints and 1100 forints (if not an engineer) per month. Employees were given an additional bonus of 15-20% of base pay for Russian language capability; 10-15% of base pay for German, English or French language capability; and 5-10% of base pay for Czech, Rumanian, and all other language capability.

8. Enclosure (C), is a [ ] sketch, and shows the organization of NIKEX.]

10. The sixth floor. See Enclosure (F) which is a [ ] sketch showing the sixth floor layout of the NIKEX building. This floor housed a covert organization called Nehéz Ipari Kulker Den (known by its abbreviation "NIKIRODA"). It worked directly with the main office of the Ministry of Foreign Trade. Its purpose was to collect from all the satellite countries technical "know how", inventions, patents, and other secret technical data. The intent of this collection was to exchange technical knowledge among the satellite countries and the USSR; but in reality the information was primarily funnelled to the USSR. [ ] it collected technical information from the Western countries for the USSR. Its members were carefully screened for Party loyalty. They sent representatives to foreign countries and their passports were obtained directly from the Ministry of Foreign Trade. The entrance to this floor was always locked and had a steel-bar door covered with wire mesh. Its members were highly trained engineers. [ ] one member [ ] was a mechanical engineer in 1949 with Chemikai Gepgray in Budapest; later became Minister of Light Industry and was transferred to Nikiroda.

12.

13. [redacted] the Lang Gepgyar in Budapest also manufactured machinery for chemical plants.

25X1

14. During reparations in 1949-52 to the USSR the Hungarian government subsidized up to 200 per cent of cost for the equipment exported. [redacted] NIKEX the cost of the equipment exported to Poland was subsidized by the Hungarian government by 20-45 per cent. A government agency called CHEMOLTIMPEX (location unknown) handled the export of chemicals and raw oils. Another government agency called Mogurt (location unknown) handled the export of automobiles and trucks. [redacted] the Agency had exported Csepel trucks to Poland.
